

**Amendments to the Specification:**

The following amendments to the specification will replace all prior versions of the specification in the present application:

Please replace paragraph [0044], as identified in the Office Action, with the following rewritten paragraph:

**[0044]** The record request ~~file~~file 84 may have the following structure, employing the XML syntax:

Please replace paragraph [0103], as identified in the Office Action, with the following rewritten paragraph:

**[0103]** As depicted in Figure 4, in a first declaration step~~100~~, the access terminal sends the presentation server 26 an identifier that identifies it uniquely and its IP (for "Internet Protocol") address.

Please replace paragraph [0105], as identified in the Office Action, with the following rewritten paragraph:

**[0105]** Thereafter, as soon as the terminal 20 is assigned a new IP address, ~~in a step 102~~ it advises the presentation server 26 of this, by means of an HTTP request, during a subsequent step 104. The new IP address of the terminal 20 is then substituted for the previous one in the user database 28 of the presentation server.

Please replace the Abstract with the attached substitute Abstract.
